

Lady Colin Campbell

was born in St Andrew Jamaica and educated there and in the United States of America. The author of several books, including London and New York Times bestsellers, she lives in London with her two sons.

'A penetrating and insightful examination of a serious subject in the form of a memoir which actually raises that medium to new heights. It will enhance the reader's life as much as it elevates the author's reputation, and will achieve the distinction of being a popular bestseller that also becomes a medical reference work. Unsurpassable.'

DR ANNA BROCKLEBANK, MD

This brilliant and moving memoir of life in a highly dysfunctional but prominent family provides the most cogent picture of a widespread disorder that is little understood but rife in prosperous circles. Starting in the dying days of the British Empire, the story takes the reader through the political and sociological changes that resulted in the Black Power Movement, by way of New York High Society and the International Set. In the process, it provides a polemic against excessive privilege that will resonate widely in today's world.

Lady Colin Campbell

'A tremendous accomplishment and a great self help book. A gripping, well-considered and informed account of emotional terrorism which illuminates a widespread but often misunderstood disorder.' Dr Anna Brocklebank, MD.

Seldom can a more surprising book have been written by a more unexpected author. With rare insight and wide-ranging knowledge, Lady Colin Campbell addresses the common but relatively unexplored problem of narcissistic personality disorder from the perspective of a family member. She covers the often painful subject with impressive humour, compassion, feistiness and a deep comprehension, leaving the reader with the knowledge that goodwill and good sense can ultimately triumph.

Disarmingly honest and revelatory about the disturbed reality of the condition that should be called "the middle and upper class disease", Lady Colin Campbell uses her unique perspective as the scion of a privileged but dysfunctional family to shed light on a subject that is too little talked about despite being so widespread. Her compelling account will both inform and inspire.
